APPLE TREES

Descriptions of the best varieties.

List of varieties is arranged in order of ripening.

- Red Bird.-The earliest of all red apples, medium size, very attractive and fair quality, a good market variety.
- Yellow Transparent.-A very early yellow apple that must be thinned to get size. Every home garden should have one or two.
- Starr.-Early, profitable as a market apple, is large to very large, a splendid cooking apple. Is a good keeper and shipper, color greenish yellow. Ripens over a long season.
- Early McIntosh.-A McIntosh that ripens in July, splendid quality and very attractive with the McIntosh flavor.
- Summer Yellow Delicious.-Has the appearance and quality of Yellow Delicious, ripens in the summer.
- English Codling.-A very large green apple that the pie makers are using almost exclusively during the two weeks of its season.
- Red Codling.- (Monmouth Beauty).-Ripens just ahead of Wealthy, fruit large to very large: color is beautiful, red stripings and splashings over a yellow ground.
- Twenty Ounce.-It is sold as a pie apple just as soon as it reaches a good size as its quality for cooking is better than later when it becomes a red apple and less juicy.
- Wealthy.-Fall, almost entirely covered with red, skin very smooth, flesh white, large, fine quality for any purpose. Tree upright and is an early and heavy bearer on all soils but gives finest color on lighter soils.
- McIntosh.-This great favorite in the market is a fall apple. Its color is purplish red overlaying the yellow green ground. Quality the very highest, size medium to quite large.
- Cortland.-A McIntosh seedling that is more attractive in color, larger and less liable to spray injury. We like it.
- Reddest Delicious.-The original Delicious has been dropped because this is so much better. Solid red all over, conical, a very popular dessert apple. Flavor, quality and color superior to Delicious.
- Macoun.-A true McIntosh type of deep red coloring ripening later. They are as large as McIntosh and on heavy clay loam, had splendid coloring and showed no russetting, better keeper than McIntosh.
- Baldwin.-This apple in Jersey is usually classed as a fall apple. It bears young, if properly thinned will bear a fine crop of very large apples, red all over and good quality.
- Yellow Delicious.-A high quality apple that bears well every year and commands a good price in the market. It is superior in quality to Delicious and does well everywhere. It bears every year.
- Rome Beauty.-As an early winter apple for New Jersey this has proven to be the most profitable. Its fine appearance and size always attracts the buyer. Color is bright red over a beautiful yellow ground, large to very large size; quality good both for cooking and eating. Tree large, spreading, gets the best color on light or gravelly ground.
- Red Rome, (Coxes).-Red, all over, large, good keeper, tree identical to Rome Beauty. Quality equal to and by some considered superior to Rome Beauty. Coxes Red Rome is, we think, a better variety than Rome Beauty for the orchard planted on heavy soil.
- Staymans.- (Staymans Winesap).-It is the very best of all winter apples for market, home use and quality. We have found this to be our best profitable and reliable orchard variety.
- Black's Staymans.-It has proven to be superior in all-over coloring on heavy soil. It is much better than the original strain in coloring on all soils, in every other way it is absolutely the same.
- Turley.-A seedling of Staymans that is very red all-over. It is large to very large and does not crack, of high quality and does not scald in cold storage. We believe that when it is better known it will supplant Staymans. Heavy bearer every year.
- Paragon.-It is more solid than Staymans, a brighter color and keeps very late in the ordinary cellar, a heavy cropper.

APPLES Additional Varieties

- Red McIntosh - A sport of McIntosh that is identical to the parent tree except that the color is deeper and more nearly covers the entire fruit. (5¢ extra in one year olds only.)
- Black McIntosh - Another sport that gets red sooner and continues to darken as the season advances. It is really not black but is a rich and deep red. (10¢ extra in one year olds only.)
- Red Gravenstein - This is a sport of Gravenstein that is almost solid red which makes a most valuable summer market apple of high quality and large size. (One year trees only at 5¢ extra.)
- Yellow Transparent - This old Russian variety is exceptionally early and as a sauce apple for home is valuable but is too small for market.
- Grimes Golden - The best of all fall apples for eating and sauce.

STRAWBERRIES

Named in order of ripening.

- Fairfax - Although of recent introduction this variety has superceded all the older early varieties because of its quality, size and color. As a market variety it stands at the top for its season.
- Dorsett - Another new early variety that is a better plant maker and sometimes outbears Fairfax, but never outsells it, although it is a better carrier but not quite as good quality, the color is bright and attractive and size is large.
- Joe.-The oldest variety now holding its own against all competitors of its season, large to very large, a good market berry of bright red and shiny yellow seeds. Foliage is exceptionally good. Do not manure or fertilize too heavily.
- Catskill - A later variety of good color and quality which extends the season to about the latest profitable time, size is large. The foliage of later varieties seldom withstands the heat and drought thus ruining the fruit before it ripens.
- Everbearing.-We have not, as yet, found a variety that we would be willing to recommend.

RASPBERRIES

- Taylor - A new red variety that we have tested and like very much. It is a very large thimble shaped berry with productiveness and hardiness that is sure to make it profitable. The price is necessarily high but we believe it worth the extra price.
- Latham.-The best known red raspberry ever introduced and more universally popular than any other. Our plants are of the Redpath strain, nursery grown in nursery and inspected and pronounced free of disease.
- Cumberland - The best and largest blackcap we have ever grown and we recommend it.

BLACKBERRIES

- Best of All - There are few varieties that are worth planting and we have found this to be better for home or market than any other kind we have tested.

CURRENTS (For N. J. planters only.)

- Wilder - The most prolific red currant yet introduced, the clusters and berries are large and easily gathered because of their long stems.
- Fays Prolific - A large, long stemmed red variety growing on medium strong plants.

GOOSEBERRIES (For N. J. planters only.)

- Downing - A large greenish yellow variety, productive and profitable.
- Red Jacket - The best red variety and the largest that can be grown successfully in N.J., quality good.

ASPARAGUS

- Washington - This is the best strain of rust resistant asparagus and since there is no other variety equally good we grow only the one kind.

PEACH TREES

Descriptions of the best varieties.

The list is arranged in order of ripening rather than giving the date of ripening which varies with each geographic locality.

Maules Early.-Red with skin almost entirely covered with red, fair quality, half cling and the earliest of all peaches.

Red Bird.-Very large, high color, bright red, very early, cling.

Cumberland.-A seedling of Belle crossed with Greensboro. Large, oval, white fleshed, usually free. Ripens before Carman.

Kathryn.-It is a perfect freestone. Ripens with the last of Carman. The color is clear cream-tinted white overspread with a beautiful pink which is very deep.

N.J. 66.-It is a large, oval, white-fleshed freestone. The fruit hangs to the tree well, even after it is ripe, and retains its firmness well. The quality is good and a bit sprightly.

Golden Jubilee.-Without question the Golden Jubilee is the best peach of recent introduction. It is similar to Elberta in tree, habit and form and appearance of the fruit. It is essentially a very early Elberta. A fine, early, yellow freestone, ripening at a time which assures a good market.

N.J. 71.-The first test was on trees that had gone through severe winters which had injured all varieties planted in the same year. The quality was remarkable for its season which is immediately after Jubilee. It is a large yellow freestone, sweet and good.

Hiley.- (Early Belle)-Skin nearly covered with red, medium size but uniform; free; oblong in shape, quality among the best.

Golden East.- (N.J. 87)-A large firm yellow freestone of fine coloring and good quality. Ripens with Hiley but much larger and of better coloring, the best market peach of its season.

South Haven.-A highly recommended, hardy, yellow freestone ripening 10 to 15 days ahead of Elberta and with better quality and coloring and equally as large. Very popular where known.

Hale Haven.-Ripening at the same season as South Haven said to have a tougher skin making it a better keeper and distant market variety. A perfect freestone with yellow flesh and good coloring and very hardy. Strong upright grower.

Rochester.-A medium size yellow freestone and one of the hardiest peaches commercially grown. Quality good.

N.J. 94.-A new yellow freestone of large size, shaped like Elberta of the best quality. In fact, the best quality of any yellow peach. Ripens with Belle of Ga. A splendid market variety.

Belle of Georgia.-It is of large size, uniform in shape and very showy. Quality is good to excellent. It comes into bearing young. Ripens just before Elberta begins.

Early Elberta.-The call for this variety has required us to offer it again. Of equal size with Elberta and of much better quality and coloring. Ripens about five days ahead of Elberta.

Elberta.-Very large, skin golden yellow and where exposed to the sun, faintly striped with red, flesh yellow, very fine grain, juicy, rich, sweet; tree very prolific and presents a luxuriant growth. It is a perfect freestone and one of the most successful market varieties. Does well anywhere.

Hale.-It ripens with and after Elberta. It is yellow with a bright red cheek, clear yellow flesh of high quality. Fruit is high quality. Tree is of rather dwarf bushy habit. Fruit is very large. Our stock came from bearing orchards of Chas. Roth and John Adams.

Brackett.-Ripens after Elberta is finished, extending the yellow peach season. It is a deep yellow well shaded with carmine, entirely free and because of its splendid quality and season it always is profitable for market.

Roberta.-This is a late variety of Elberta that has all the good qualities of its parent and lengthens the season considerably.

Late Elberta.-A large, handsome, highly colored peach, very similar in appearance to Elberta but ripens later.

Adams Late.-It is the best of all peaches ripening after Elberta, ripens ten days later. A very large, yellow freestone with finer coloring than Elberta and better quality.

Iron Mountain.-Pure white, white skin sometimes has a slight blush. Large to very large, egg shaped, free, of the very highest quality. The best canning peach ever grown as well as the best eating variety. Hardy in bud.

CHERRIES on Mazzard Stock.

- Bing - One of largest very dark red cherries, highest quality, semi-free, midseason.
- Black Tartarian - Large to very large, sweet, juicy and high quality for dessert or canning. Glossy black and slightly earlier than some others.
- Centennial - A very large amber colored fruit overlaid with crimson, sweet but sprightly and meaty.
- Early Richmond - An early, sour pie cherry, medium size, light red, freestone.
- Gov. Wood - Large to very large, yellowish white shaded with crimson, a very popular variety for the home garden.
- Lambert - A midseason, blackish red cherry with dark flesh, sweet and of splendid flavor.
- Large Montmorency - A midseason tart cherry, dark red, freestone, large and highest quality, long stems.
- Mercer - A dark red freestone of large size and splendid quality.
- Napoleon - The largest variety in our list. It is bright red over a yellowish background.
- Schmidts (Bigarreau)-Large to very large, purplish black with dark red juice, sweet and high quality.
- Yellow Spanish.-An old variety, sometimes called Amber Heart. Large, yellow with a slight blush.

PEARS

- Anjou - Midseason pear, good quality, larger and later than Bartlett, greenish russet.
- Bartlett - The best known and most popular variety because of its size and quality. Ripens second early.
- Bosc - Of highest quality, russetty yellow with long neck, quality best of all pears, very juicy and sweet, late.
- Clapps - A early yellow pear with bright red cheek, of good quality.
- Keiffer - The most prolific and hardiest of all pears in N. J. When properly cared for is splendid canned.
- Seckle - Small, medium, late very sweet russet variety and highest quality.
- Sheldon - A juicy, high quality, heavily russetted variety. Large, medium, late.
- Worden-Seckle - A large seedling of Seckle which it equals in quality, smooth, light russet, juicy.

PLUMS

- Bradshaw - A large, early dark purplish red variety of good quality, freestone, juicy.
- German Prune - Very large freestone, dark purple prune, sweet and fine quality.
- Grand Duke - A handsome fine dark violet red plum, very large and fine quality.
- Green Gage - Medium size, greenish yellow variety, sweet and good.
- Reine Claude - A large type of the above. Flesh yellow, juicy, sweet and melting.

QUINCES

- Orange - An early variety of highest quality. While it is smaller than some others it has the best quality of all.

GRAPES

We are not giving you a long list but these are the best for N.J.

- Brighton - Early, large clusters of large wine red berries, sweet and highest quality.
- Campbells Early - A large black variety that ripens early.
- Caco - A large grape of pale red coloring, bunches loose, highest quality.
- Concord - The best of all our grapes because it bears well, is hardy, of high quality has large cluster of large purplish black fruit in great quantities.
- Delaware - A small red grape in compact clusters. The sweetest of all grapes.
- Lutie - A early red variety of medium size in small bunches, sweet and juicy.
- Niagara - The best white grape in this section, extra large, compact bunches slightly aromatic and sweet.
- Worden - A very large black grape ripening before Concord and that is unsurpassed for quality.

BOYSENBERRY

This is the largest of all berries. It has the general characteristics of the better Dewberries, being a trailer and must be supported by wires or trellis or stakes. It bears immense crops of enormous fruit.

It is very hardy having withstood a temperature of 17 below zero.

The fruit is very large and resembles the Dewberry, dark red in color, seeds are very small, in flavor it suggests a high quality red Raspberry. Its quality is unsurpassed when canned, jellied or preserved. Its high content of juice makes it desirable as a beverage maker.

Send for descriptive illustrated circular.

WHITESBOG BLUEBERRIES

These very large cultivated and improved Huckleberries have pleased everyone who have tried them. The seeds are so small as to be unnoticed when eating them. They should have sour soil.

JERSEY.-One of the newest and the largest varieties often producing berries three quarters of an inch in circumference. Produces good crops the second year. Exceptionally high quality.

RANCOCAS.-A very popular variety of good size whose branches and fall foliage are very attractively colored.

CONCORD.-A tall strong grower with bright red twigs bearing great quantities of large berries. Ornamental as well as useful.

ORNAMENTAL STOCK

NORWAY MAPLES.-Without question this is the best shade tree for the middle Atlantic States. It forms a round symmetrical head covered with broad flat leaves. It is very hardy and free of disease and pests than any others. Our prices are right.

PIN OAK.-This tree is usually found in wet places but has proven to be one of the best and hardiest ornamental trees on high ground.

EUROPEAN MOUNTAIN ASH.-A narrow upright tree hardy with handsome foliage and showy red berries.

RED FLOWERING DOGWOOD.-The most attractive flowering tree. The light red and pink flowers persist for a long period and the fall foliage is unequalled. Dwarf and bushy. Every yard needs one.

WHITE FLOWERING DOGWOOD.-Too well known to need a description.

JAPAN FLOWERING CHERRIES.-The most widely advertised flowering trees because of its Washington notoriety.

KOFUGEN.-Crimson buds opening into a very double pink bloom.

KWANSAN.-Compact grower, red buds and pink bloom.

WEeping.-Very graceful, single pink flowers and in great profusion.

SCHWEDLERS MAPLES.-A Norway Maple that has dark red buds that open as deep red leaves. Slightly dwarfed than Norway.

EUROPEAN LINDEN.-A small leaved tree that is rather a low grower with attractive foliage. Rather slow grower, fine for small lawns.

TEAS WEEPING MULBERRY.-An attractive weeping tree for small lawns that produces great quantities of sweet black fruit.

MAGNOLIA SOULANGEANA.-The purplish pink flowers cover this tree completely before the leaves appear in early spring. Our stock is fine and very moderate in price.

JAPAN MAPLES.-Atropurpureum, a reddish purple leaved maple of very dwarf habit is an ornamental shrub-like tree with most attractive coloring. Our prices for grafted trees are exceptionally low.

WEeping WILLOW.-The true weeping type with long pendulous branches. It needs damp rich soil for its proper development.

PAULS SCARLET HAWTHORNE.-A true English type that bears scarlet flowers in great profusion. Most attractive and hardy.

ENGLISH WALNUT.-This is not truly an ornamental tree yet for a back yard it is a good shade tree that bears edible nuts of fine quality. Our grafted trees are very hardy and the seedlings we offer are grown from nuts from the hardiest types.

HEDGING

CALIFORNIA PRIVET.-There is no formal hedge plant that can compare with this. By trimming it can be kept any desired height and very close and dense. Foliage is very rich green and hangs on almost all winter. Plant 6 to 9 inches apart.

JAPAN BERBERRY.-A background of evergreens and defensive hedge, its bright red berries and graceful habit makes it very attractive. Needs no trimming. Set 12 to 15 inches apart.

SPIREA VANHOUTTEI.-For marking property lines there is nothing that is better. It needs no trimming, is always graceful, especially while completely covered with its droops and wreaths of white bloom. Its foliage comes early and stays late. It is a wonderful hedge. Set 2 to 3 ft. apart, by setting 3 ft. permits individual development.

BROAD-LEAVED EVERGREENS

- AZALEA.-We offer the best and hardiest of these beautiful flowering evergreens. They are the most beautiful of all hardy shrubs.
- AMOENA.-Perfectly hardy, blooms profusely, bright rosy purple.
- AMOENA COCCINEA.-A bright red type of Amoena. Dwarf and beautiful.
- HINODEGIRI.-Larger leaves and flowers than Amoena and more dwarf and spread, flowers bright crimson. Dwarf and spreading habit.
- CARMEN.-Very hardy hybrid with large rose colored flowers.
- CLEOPATRA.-Another hardy hybrid, taller grower, large old rose bloom.
- FEDORA.-The best of hardy hybrids bearing exceptionally large, salmon rose bloom in great profusion. We recommend it very highly.
- LOUISE.-Light rose flowers on tall hardy plants. Bloom is very large
- OTHELLO.-Brick red flowers, very striking, hardy and very distinctive
- ZAMPA.-Open, spreading grower bearing strawberry red leaves.
- Besides these we have LEDIFOLIA ALBA in White and Rosea in pink.
- FLAME.-In bright madder red and copper. Good foliage and attractive.
- RHODODENDRONS.-Beautiful in foliage and flowers. Good for shady places.
- CATAWBIENSE.-A half dwarf, native with rosy purple flowers.
- MAXIMUM.-A tall native, the hardiest and best foliage, light flowers.
- AMERICA.-The deepest clear red, large flowers.
- DR. H. C. DRESSELHUYS.-Aniline red, large flowers, splendid foliage.
- MRS. C.S. SARGENT.-Rosy red or deep pink, very large flowers.
- ROSEUM ELEGANS.-Clear rose pink, compact grower, perfect foliage.
- We also have ALBUM NOVUM in white, ALPHION in clear pink with white center. All were transplanted often and are full of buds.

OTHER BROAD-LEAVED EVERGREENS

- ENGLISH BOX OR BUXUS SUFFRUTICOSA.-The well known edging type.
- DAPHNE CNEORUM.-A low creeper that bears sweet pink flowers all summer
- AMERICAN HOLLY.-The type that bears red berries in great profusion.
- OREGON HOLLYGRAPE (Mahonia Aquifolium).-An evergreen holly like shrub, large, oblong-ovate leaves, dark green and lustrous flowers yellow in many flowered racemes, berries small and blue.

EVERGREENS (Cone bearing type)

We describe only a few here, if you are interested upon request a complete descriptive list will be sent.

All our evergreens are many times transplanted and sheared.

- ABIES CONCOLOR.-The handsomest of tall growing evergreens. It is compact and symmetrical with beautiful silver tinted foliage.
- COLORADO BLUE SPRUCE.-These are seedlings of more or less of steel blue on the young growth. Koster's was a selected specimen.
- KOSTER'S BLUE SPRUCE.-This is a grafted type of the above that is very blue, beautiful and distinctive. Is a lawn tree that needs plenty of room to develop and display to advantage its beauty.
- HEMLOCK.-A perfectly hardy tree that has some use on every lawn as a specimen, in a group, or as a hedge or windbreak. It will become a very tall, irregular tree if not pruned and very suitable for large areas. Sheared, it can be kept in any shape desired and made to fit any place. The foliage is very soft, feathery and pleasing.
- JUNIPERUS PFITZERIANA.-A low broad spreading type of cedar has its place in front of every group of evergreens and is most suitable for use beside bungalows where it never will dwarf the height of the building as all tall evergreens will eventually. An irregular type of growth that may be controlled by pruning or allowed to go its own merry way. It is very attractive.
- JUNIPERUS EXCELSA STRICTA.-A naturally regular pyramid with very pronounced deep green foliage and semi dwarf habit.
- NORWAY SPRUCE.-A fast growing hardy tree that must not be placed close to a building as it spreads very much. The foliage is an attractive green. As a sturdy windbreak there is nothing better. As a lawn tree shaped by pruning once a year it becomes compact uniform and handsome. Nothing lends itself better to Christmas decoration. The price is so low that no one need be without it even if you are a renter.

A complete descriptive list with prices of evergreens will be sent upon request.

Also send for our list of Roses and prices.
